T-39-15

Features

- Internal isolation between input and output stages
- The power supply for the driver must not be isolated
- CMOS compatible input

Typical Applications

- DC choppers
- AC motor drives
- Power supplies for LASERs
- Uninterruptible power supplies
- Ultrasonic generator
- Plasma cutting
- Inductive heating
- Electronic welding

This is an electrostatic discharge sensitive device (ESDS). Please observe the international standard IEC 747-1, Chapter IX.

1) For the ratings and characteristics of the power MOSFET output stages see the corresponding tables and diagrams
 2) The case temperature of the module is the ambient temperature of the built-in driver
 3) These types contain gate resistors to reduce di/dt
 4) For higher operating frequencies please consult your SEMIKRON service office
 5) Important! See also the technical explanations in Part A
